

GALVANISED SHEFFIELD CYCLE STAND - SUB SURFACE MOUNT

OVERVIEW

The Sheffield Cycle Stand provides a strong, secure, and practical solution for bike parking in public, commercial, and high-traffic environments. Designed for sub-surface mounting, it is installed directly into the ground for a permanent, tamper-resistant fit that ensures long-term reliability.

Manufactured from hot-dip galvanised steel, the stand is highly resistant to rust and corrosion, delivering dependable performance in all outdoor conditions. The sub-surface mount design makes it an ideal choice for projects requiring a robust and lasting installation, while retention sockets can also be used where future removal or reinstallation may be necessary.

With its classic Sheffield design, the stand supports bicycles via the frame, allowing both the frame and wheels to be locked securely to minimise theft. Correct spacing during installation ensures easy access for multiple users, making it a trusted choice for schools, offices, transport hubs, and public spaces.

FEATURES

- Sub-surface mount – Installed directly into the ground for a secure, tamper-resistant fit
- All-weather durability – Designed to perform in any outdoor environment
- Secure & space-saving – Reliable bike parking that fits seamlessly into any setting
- Sleek, professional look that enhances public spaces

TECHNICAL DATA

SPECIFICATIONS	DETAILS
Product Code	797814
Height	750 mm
Width	800 mm
Material	Hot-dip galvanised steel (in accordance with BS EN ISO 1461)
Diameter	48
