

AUTOBAHN REFLECTIVE FLEXIBLE POST

pittman[®]

OVERVIEW

The Autobahn Reflective Flexible Post is designed to provide a highly visible and flexible solution for controlling and separating traffic in car parks, restricted areas and other off-highway locations. It can be used to highlight parking spaces, bends, low walls and areas where vehicles or machinery operate regularly.

Manufactured from long-lasting anti-aging polyethylene, the post measures 1000mm high with a diameter of 100mm. Full reflective red and white strips provide excellent visibility, while the flexible construction allows the post to bend when struck, helping reduce potential damage to vehicles.

Designed for quick and straightforward installation, the post bolts directly into the ground using the included fixing screws and recycled rubber base. Its flexible bungee cord system allows the post to bend towards the ground on impact before immediately returning to its original upright position.

FEATURES

- Flexible Design – Bends on impact to reduce damage and quickly returns to its original position.
- High Visibility – Reflective red and white strips provide excellent visibility in low-light conditions.
- Durable Construction – Made from long-lasting anti-aging polyethylene for frequent use.
- Easy Installation – Bolt-down recycled rubber base with all required fixing screws included.

TECHNICAL DATA

SPECIFICATIONS	DETAILS
Product Code	SKU: 756426
Height	1000 mm
Diameter	Ø100 mm
Base and Post Height	1060 mm
Base Diameter	260 mm
Post Material	Polyethylene
Base Material	Recycled Rubber
Post Weight	2.5 kg
Base Weight	2 kg
