

BENITO STEEL RECTANGULAR PLANTER

pittman[®]

OVERVIEW

The Benito Rectangular Planter is designed to provide a durable and stylish planting solution for modern urban and public environments. Ideal for public spaces, corporate areas, shopfronts and streetscapes, it helps introduce greenery and colour while also providing a practical way to define and separate different areas.

Manufactured from high-quality steel, the planter undergoes the Ferrus treatment process for enhanced durability and corrosion resistance. This includes an electrolytic bath, epoxy coating and a final forge black polyester paint finish, providing long-lasting protection against demanding outdoor weather conditions.

Designed for permanent installation, the planter features four fixing points and can be secured directly into concrete using suitable expansion bolts. Its robust rectangular design makes it suitable for displaying a variety of plants and flowers, while also allowing it to be used for pedestrian separation, cycle and vehicle segregation, shopfront protection and creating parklets.

FEATURES

- Durable Steel Construction – built for long-lasting performance in demanding outdoor environments.
- Excellent Corrosion Resistance – Ferrus treatment provides enhanced protection against rust and weathering.
- Versatile Urban Design – ideal for public spaces, shopfronts, corporate areas, streetscapes and parklets.
- Secure Installation – four fixing points allow the planter to be securely bolted directly into concrete.

TECHNICAL DATA

SPECIFICATIONS	DETAILS
Product Code	SKU: 713783
Height	520 mm
Width	1000 mm
Depth	425 mm
Material/Finish	Steel with FERRUS treatment
