

GHP CABLE TIDY - PROTECTION RAMP INDOOR 1M

pittman[®]

OVERVIEW

The GHP Cable Tidy is designed to provide a practical cable protection solution for indoor areas where exposed cables can create trip hazards. Ideal for offices, warehouses and other workplaces, it helps protect cables from damage while providing a safer route for foot traffic and office trolleys.

Manufactured from highly durable rubber, the cable tidy measures 1000mm long, 140mm wide and just 20mm high. A single channel provides protection for cables, while the low-profile design allows pedestrians and trolleys to pass over with ease. Available in black or high-visibility yellow to suit different workplace requirements.

Designed for quick and flexible installation, each 1-metre section can be connected end-to-end with additional GHP cable tidies to cover longer distances. No permanent fixing is required, allowing the ramp to be easily lifted, moved or repositioned when cleaning, relocating machinery or changing workplace layouts.

FEATURES

- Durable Rubber Construction – Manufactured from robust rubber for long-lasting performance in busy workplaces.
- Reduces Trip Hazards – Covers exposed cables to create a safer route for pedestrians and office trolleys.
- Quick & Flexible Setup – 1-metre sections connect end-to-end to create longer cable protection runs as required.
- Low-Profile Design – Just 20mm high, making it ideal for use in offices, warehouses and other indoor environments.
