

GHP CORNER PROTECTOR

pittman[®]

OVERVIEW

The GHP Corner Protector is designed to provide reliable protection for exposed corners and edges in busy workplace environments. Its rigid construction helps protect walls and beams from impacts caused by forklifts, pallet trucks, trolleys and other workplace traffic.

Manufactured from rugged natural rubber, each corner protector provides a durable solution for demanding industrial environments while weighing just 2kg for straightforward handling and installation. High-visibility yellow markings help ensure the protector can be easily seen by warehouse operatives and other staff.

Designed for quick installation, the protector features four pre-drilled mounting holes and can be fixed directly to the required surface. Measuring 800mm high and 90mm wide on each side, it is ideal for warehouses and other busy areas where corners are at risk of frequent impacts. Fixings are required but are not included.

FEATURES

- Impact Protection – Helps protect exposed walls, beams and corners from workplace traffic.
- Durable Construction – Manufactured from rugged natural rubber for use in demanding environments.
- High Visibility – Yellow markings help make the protector clearly visible to staff and vehicle operators.
- Fast Installation – Four pre-drilled mounting holes allow for straightforward installation directly to the surface.

TECHNICAL DATA
