

PVC PUSH-FIT IMPACT PROTECTION

pittman[®]

OVERVIEW

The PVC Push-Fit Impact Protection is designed to provide a practical and cost-effective solution for protecting beams and edges from impact damage. Ideal for warehouses, storage areas and other busy workplaces, it helps reduce damage caused by forklifts, machinery and other small work vehicles.

Manufactured from long-lasting PVC, each protector measures 1000mm long, 40mm wide and 40mm high. Three high-visibility yellow markings help ensure the protection can be easily seen by employees and vehicle operators, while the durable construction provides reliable protection in busy working environments.

Designed for quick and straightforward installation, each piece features an 8mm slot that slides directly onto the required beam or edge. No fixings or adhesives are required, allowing the protector to be installed quickly while also making it easy to remove or reposition when required.

FEATURES

- Durable PVC Construction – Long-lasting design helps protect warehouse beams and edges from everyday impacts.
- Quick Push-Fit Installation – 8mm slot slides directly onto edges with no fixings or adhesives required.
- High Visibility – Three moulded yellow markings make the protector easy to identify in busy work areas.
- Impact Protection – Helps protect beams and edges from forklifts, machinery and other small work vehicles.
