ASK THE POTHOLE EXPERTS

1) What Tools are required?

One man (or woman), a shovel, perhaps a broom, maybe some gloves, and a hand tamper or other item that will help you obtain compaction (board, car tire, etc.)

2) Can I seal over EZ STREET cold asphalt, and, if so, how long do I have to wait to do the sealing?

Generally, our customer consensus is: provided you use a high quality sealer, and wait a minimum of 30 days prior to sealing, you can seal over EZ STREET cold asphalt.

3) What is EZ STREET cold asphalt made of?

The highest quality ingredients, consisting of a refined gradation of rock and sand, and a proprietary polymer formulation (the secret ingredients).

4) Should I clean the pothole out before I fill it in with EZ STREET cold asphalt?

Just try to get as much of the loose debris from the hole – the better you clean it, the better the performance.

5) How long will the product last in the bag?

A year. But don't put off the project, ok.

6) Can I use EZ STREET cold asphalt over concrete?

Yes, it will stick to concrete, brick, and a variety of other surfaces.

7) Sometimes after I patch a hole, the product appears to be "soft". Is there something wrong with it?

Not usually, really. The asphalt component of EZ STREET cold asphalt is a viscous liquid, that reacts quite interestingly to changes in temperature. When it's a scorcher of a summer day out there, and you absolutely want to patch something, and you find that after you use the product, it appears "too loose" you can remedy this by sprinkling a bit of cement dust on the top of the patch.

8) Is it permanent?

YES! IT'S GUARANTEED PERMANENT.

DRIVEWAY REPAIR

Read what others have said

Best I have Seen on Market!

I have in years prior used typical black top patch. EZ Street by far leaves those products in the dust. Seemingly a technological breakthrough. You can work with it when the ground is wet. And after giving it time to cure, about one month, you can seal over for continuity. Great!

-Stevie Step, New York NY on 10/28/2007

My pothole repair is easy.

So glad I found this product. I was able to patch the pothole in our driveway all by myself. We had spoke with other repair people about repaving and patching, but this was much less expensive and it worked great. We had a couple of potholes to repair -- used two bags -- I used the shovel

we already owned and a little muscle (not too much) and my part was done in less than 30 minutes.

-Maria Stewart, Kalamazoo, MI on 7/26/2007
